

AKTIETRYKKERIET IN NORWAY INVESTS IN DRCS SYSTEM FROM DCOS SWEDEN AB

Aktietrykkeriet decided late last year to upgrade an old retainer, its KBA Compacta C214 press. The press has for 16 years been an important part in Aktietrykkeriets production and to further increase the print quality, secure productivity and uptime, it was decided to replace the existing GrafikKontrol register system.

A key requirement was that the system must handle continuous register movement (so-called anti-embossing) to avoid ghosting, piling and embossing. Something that has been a problem before this upgrade. The press is now equipped with DCOS DRCS color-to-color register and ribbon control for two ribbons.

"We experience Aktietrykkeriet as a highly skilled printer who throughout the procurement process proved to be familiar with and knowledgeable in their expectations of the system. We have an ambition to take a position even at Heatset market and cooperation with Aktietrykkeriet is an important step in that direction for us," said Mattias Anderson, CEO DCOS.

Roger Olsen, manager Aktietrykkeriet press: "We chose DCOS due to: ease of use, micro marks, anti-embossing, proximity to suppliers and a competitive price. The system is fast, stable, and we achieve better quality. Washing intervals has also increased and our running waste is therefore reduced. We are very pleased with the setup, solution and supplier".

The installation was completed in February this year and is now used in full.

About DCOS

At DCOS (Drive-Controls-Operator Systems) we are committed to providing increased productivity in our customers' printing processes. Thanks to specific expertise in printing automation and many years of experience from the printing industry we offer best of breed products and solutions.

As for products we offer hardware such as drive controls, control desks and closed loop systems as well as software for operator interface and production management. However, just as important as our products is our dedication to always finding the optimal solution for every situation we are presented with.

Since the company started in 2004 we have helped optimize printing processes all over the world. We work directly with our customers as well as via a network of carefully selected agents.
